## **PROFESSIONAL EXPERIENCE**

**Proof Investigação Digital – São Paulo** Dec/2011 - Present  
Senior Information Technology Security Analyst

Consulting services for large clients in São Paulo area using new networking and security technologies.

**Stefanini IT Solutions /  
Telefonica Empresas Datacenter – São Paulo** Nov/2010 – Dec/2011  
Senior Information Technology Security Analyst / Tech Leader

Started as Senior Analyst and then promoted to Tech Leader of a team dedicated to respond to 3th level Security Incidents of Telefonica Empresas' CIS Datacenter.

Reinforced the security and privacy of Security Operations by desinging and controlling a complet remodeling of Equipments Inventory Database and the AAA Policy review when accessing clients equipments.

Responsible for virtualizing all Security/Networking staff supporting systems that were using stand-alone solutions of HW and SW.

**Foco Gestão em TI – São Paulo** June to November 2010  
Senior Information Technology Security Analyst

Acting in the Project Management and Solutions Architecture fields.

Main projects includes LAN/WAN infrastructure review, renegotiation of telecom contracts, legacy WAN migration to VPN over the Internet, support in response to external auditors, selection and acquisition of Internet content management solutions.

**Future Security - São Paulo**

Feb/2008 – Jun/2010

Senior Information Technology Security Analyst

Acting in the Project Management and Solutions Architecture fields, I supported pre-sales, planning and implementation of security solutions to clients from different market areas.

Intermediation of customers' business demands through the survey, analysis, and planning of security environment changes in addition to security events auditing and CMDB with new tools (' ArcSight ' and ' Tufin Secure Suite ').

**Construtora Norberto Odebrecht S/A**

Apr/2001 – Feb/2008

Rio de Janeiro and São Paulo Headquarter

Senior Information Technology Security Analyst

Assessment, planning and deployment management of new IP backbone, based in outsourced VPN connections with a single operator in Brazil.

Technical evaluation to eliminate problems in the hiring of services and purchases for Telecom and Security (Brazil and other countries), transparency to remote IT administrators by establishing a network monitoring website and supporting Enterprise Central Helpdesk staff.

Increased inspection of networks, management of roaming users access provision, migrations to VPN site-to-site via Internet, dissemination and adoption of new standards of 'clusters' of 'Firewalls '. These changes raised the levels of availability and security of network access.

International Attention to issues of Security and Network with local presence in South Africa, Angola, Argentina, Colombia, Ecuador, United Arab Emirates, United States and Venezuela.

Evaluation of MPLS VPN carrier to support voice/video traffic (national and international) and expansion of VPN network model to other countries, always adopting posture of pre-sale channel next to operator and post-sale with internal client.

Planning and deploying Cisco IP telephony for privacy and encryption support of voice traffic between strategic resources.

**Construtora Norberto Odebrecht S/A**

Apr/1998 – Mar/2001

Country director and Luanda Sul Project offices - Angola

Information Technology Security Analyst

Introduction of new control and security systems and enabling Internet services offer to third parties without compromising enterprise security.

Deployment of an IP Backbone bonded to the national 'Newbridge' Frame-Relay data and voice network, with reliable email, proxy and DNS services, making local IT independent of company HQ's infrastructure in Brazil.

Management of a team formed by technicians in the areas of User support, electronics and Radio in addition to the central corporate PBX operators.

Responsible for critical operations on Oracle database and AIX servers, acting as 2nd level support to all IT managers in the country.

Establishment of the first procedures for monitoring security, deployment and content consumption, remote support, periodic review of configuration and reinstallation of stations and servers.

Environment fix to support the ' Millennium bug ' and Intranet site creation with support systems to some areas of the company, such as (HR, equipments and buying & procurement).
